

(c) When the vehicle is about parallel to the kerb, return the steering wheel to its straight-ahead position and continue to reverse in a straight line;

(d) Stop your vehicle before it touches the kerb at the rear.

- 151 When reversing into a parking lot between other parked vehicles, use the same technique as mentioned above. In this case you should use the right corner of car A as a guide. As the right corner of car A is sighted in your left quarter-glass, turn your steering wheel 'full lock' to the left.

- 152 Before moving out of the lot, check for traffic on both sides of the road. When it is safe, drive forward slowly until your body is in line with the front bumper of the vehicle on your left. Turn the steering wheel 'full lock' to the left and drive out carefully. Do not make a wide turn when moving out.
