

THE VEHICLE IN FRONT

204. Practice safe distancing. When riding look far ahead, ensure the following:
- Position yourself on the centre of left side of the lane so that you can see most of what the driver ahead is seeing;
 - Observe all vehicles, paying special attention to the vehicle in front;
 - Be alert for any changes in traffic situations or patterns;
 - Look out for brake warning lights and indicator lights on vehicles travelling in front of you. This should give you ample warning to react quickly.
 - The distance (in metres) at which you should look must be at least 3 times the speed (in km/h) at which you are riding.

THE ONCOMING VEHICLE

205. Always look far ahead, analyse the road in front of you and anticipate any problem you might have with the oncoming vehicle. If an oncoming vehicle from an adjacent lane signals to change lane, do not accelerate. Slow down instead and leave a gap for the vehicle to enter your lane.

STATIONARY VEHICLES

206. When there are several stationary vehicles on the left lane, do not weave in and out. Use the next lane on the right instead and move back to the left lane after you have passed them.
