

HOW TO PUSH AND MANOEUVRE THE MOTORCYCLE

86. The following shows you how to push and manoeuvre a motorcycle safely.

KEEPING THE MOTORCYCLE UPRIGHT

87. Hold the front brake firmly and try to keep the motorcycle body upright and vertical to the ground.

- i. Maintaining in an upright position would mean you do not have to put in much strength.

- ii. To prevent the motorcycle from falling off the right you can lean the motorcycle body towards body.

PUSHING THE MOTORCYCLE FORWARD

88. When you move forward lean the motorcycle slightly closer to your body. Apply pressure on your waist and push it using your weight. It's easy to lose balance if you look down, so always look towards the direction you want to go. Apply front brake to slow down and stop motorcycle.

PUSHING THE MOTORCYCLE BACKWARDS

89. Steer the handlebar with your left hand and put your right hand against the seat. Look towards the back and push motorcycle backwards. Twist your hips and point your legs in the direction of where you are moving towards and not sideways. Keep the motorcycle upright and close to you.
