

- 247 When overtaking, keep a safe distance between your vehicle and the cyclist and do not cut in sharply after overtaking the cyclist. If conditions do not permit, slow down behind cyclists and wait until it is safe to overtake.
- 248 When parking, watch out for passing cyclists when opening the door of your vehicle.
- 249 When encountering cycling groups of more than 5, travel between cycling groups and overtake only when it is safe, and look out for cyclists who are slowing down.

MOTORCYCLISTS

- 250 Motorcyclists, due to their small size and fast speed, are sometimes not clearly visible. Always be on the look-out for them. Give way to them as they are easily injured should they fall. Do not insist on the right on way.
- 251 Motorcyclists may not be aware of your intention to pull out. Allow them to pass first before pulling out.

- 252 When slowing down or stopping, beware of motorcyclists who tailgate. Signal your intention early so as to avoid getting hit from behind.
