

CHANGING LANES

106 The most difficult aspect of changing lanes is the estimation of speed and distance of vehicles approaching from behind. As such, drivers will have to confirm the situation with regular glances at the mirror inside the cabin as well as the wing mirror. To change lanes safely, this is what you should do:

At 'a'

- (i) Check mirrors;
- (ii) Signal your intention;
- (iii) Check blind spots.

At 'b'

- (i) Adjust your speed;
- (ii) You may have to slow down or speed up depending on the traffic situation behind you.

At 'c'

- (i) When it is safe, accelerate smoothly and steer gently into the lane intended without interrupting the flow to traffic.

At 'd'

- (i) Cancel your signal and resume your normal speed.
